[“Of the twelve characteristics of modern monetarism, five are explicit in Hume’s writings: the quantity theory, the Chicago transmission process, private sector stability, the vertical Phillips Curve, which Hume originated, and preference for free markets. Two others, irrelevance of allocative detail and focus on the price level as a unit, are implicit. Preference for reduced-form models fits Hume’s theory of causation. Preference for stable money growth fits the whole tenor of Hume’s discussion. Two propositions on targets and indicators were irrelevant in Hume’s day, but Hume rejected the monetarist’s strong opposition to inflation…”]

FOLDER: Abba P. Lerner (University of California, Berkeley). *Consumption-Loan Interest and Money*. Jan. 1959. [Conservation Note by Bruce MacMillan 3.20.08: Document is typeset with blue ink, is fading, and needs to be copied onto acid free paper.]

FOLDER: Patric H. Hendershott. *A Flow-of-Funds Model*. Nov. 1962. [1 original typed manuscript or copy] [Conservation Note by Bruce MacMillan 3.4.09: This document appears to have suffered water damage some time ago. Many of the pages were stuck together at the corner. It is now dry and stabilized. I interleaved every page with acid-free paper.]
